If I could invent anything not ever invented I would make the car from “Back to the Future.” People could go back in time and do stuff they probably couldn’t do then. Also, so much trash wouldn’t be collected because it can use garbage for gas. A time-traveling car would be cool and that is what I would invent.

Maddox Pennington, 5th, Jonesville Middle, Mrs. Brown

I would create a singing cake. It would sing happy birthday. I love cake.

Shelby Balthis, Kindergarten, Hilton Elementary, T. Howe

Bubble cars should be real. In this paragraph I will tell you what they would be like. They would be hard to break because they’re made of solid bubble. Solid bubble is made of liquid metal and bubble soap. If you got in a wreck while you’re in a bubble car you wouldn’t get hurt because everything in it is padded. If you manage to break it you can just inflate it again. If you want a design on it just go to the nearest workshop and ask them to do whatever you want on it for \$50. Bubble cars would be great if they were real.

Jayden Morgan, 4th, Miller Perry Elementary, Ms. Jeffers

If I had the ability to invent anything, I would create a self-organizing closet. I often have to deal with not having enough room for clothes, and it is exhausting to hang up clothes and then tear them down just to find my favorite top. This machine will put your clothes up in any order; color, size, favorite to least favorite, and even by seasons! All you do is put a piece of clothing on a hanger and set it on an arm that will put it in its proper position. It will also find any outfit you want if you put in the name that you gave that outfit on a keypad. If clothes fall down, it will place them back to their original spot and clean off the lint and dirt it picked up from the ground. This would make my closet look much neater and save the hassle of organizing it myself.

Kaycee Bowman, 8th, Surgoinsville Middle, Mrs. Hensley

I would invent a machine that could stop time. I would call it The Pauser! It would look just like a watch so nobody would notice I was wearing it. When I click the stop time button it would stop everyone from moving but me for 30 minutes. That way I could pause time to do more of the things I love to do—like play video games, build Legos, and read books. I guess I could also use it to get my homework done without losing time. Wait that could be a really good trick to play on my mom. She could hand me a worksheet I’m supposed to do. I could hit the button and get the worksheet done. I bet she’d have this really confused look on her face when I handed her a completed worksheet right back in a second of real time! If I could invent The Pauser I would use it all the time. It would be the best invention ever!

Clay Reynolds, 4th, Mount Carmel Elementary, Mrs. Morelock

Invent something you wish existed.

If I made an invention it would be a cupcake maker. It would be fast. You would put the batter on the top and it would fall in the pan. It would turn them into a shape and then it would put every kind of color you want. Then, it would come out perfect at the end. Then you would grab your cupcake.

Avery Bruner, 2nd, Rock Springs Elementary, Mrs. Charlton

I wish I could invent flying horses. The horse could take me to school. I love them so much.

Alyssa Garrett, 2nd, Nickelsville Elementary, Mrs. Gilmer

I would like to invent talking animals. I have 4 cats, 8 kittens, 3 dogs, and 2 roosters. When they crow, bark, and meow it is so confusing. I love animals. I really want another dog.

Kylee Owens, 5th, Jonesville Middle, Mrs. Austin

I wish that I could invent a cyborg bearded dragon that can talk and play soccer really well. He would be able to do tricks in soccer. His favorite thing to do is to go skateboarding. He likes to practice soccer with his friends. He would be a great friend and an awesome pet.

Isaac Horne, 5th, Shoemaker Elementary, Ms. Garrett

I would create a meatball machine.

Zemara Neeley, Kindergarten, Hilton Elementary, T. Howe

If I had an invention to help people I would make a robot that prevents bullying. The way my robot will help is it will see someone bullying and tell them to stop, in a good way. The reason it will say it in a good way is because the robot does not want to be mean. You should treat people how you want to be treated. My robot will love and care about feelings and you, your family, and friends. If you were mad he would try and help you. He loves people and helps people. He is the friend that is always there for you. My robot will help old people cross the street. My robot will help people from bullying and pushing you and making you feel bad. You should never be mean to people. That is an invention I wish was real because it helps people. If this robot was real it would make the earth a better place. A robot can help you through things that bring you down. A robot will always be your friend and family. My robot will never get mad, sad, or even confused—my robot just gets it.

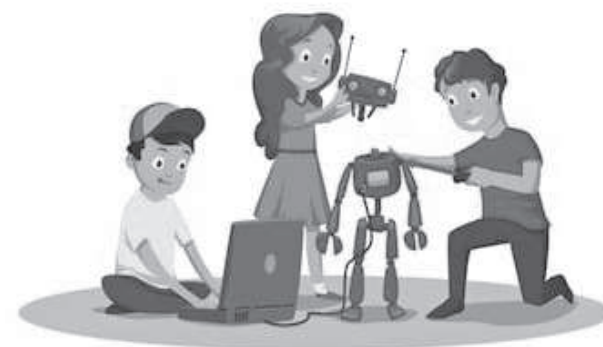

Paige Lowery, 4th, Miller Perry Elementary, Ms. Jeffers

I wish I could make a 7th grade next door so my sister can be close to me. I can wave at her when I go by her classroom. I want her next door so she won’t have to go to Gate City.

Ellie Duncan, 2nd, Hilton Elementary, Mrs. Edwards

If I made an invention it would be a unicorn transformer. It will be big enough to fit a unicorn in one cage and big enough to fit a human in the other. What it will do is let a human change into a unicorn and have its powers for six hours. You may have been wondering about the other unicorn—well wonder no more! The other unicorn will be a human for six hours. And when they are done, they will come back to the transformer and turn back into a human and unicorn.

Megan Fleenor, 6th, Jonesville Middle, Mrs. Brown

I would most likely invent a portal gun because you can teleport people or objects from one place to another. It would be two feet long, blue and white, made of carbon steel and have a long magnified scope. It would be made with a bolt action reload. The portal gun would have four charging cells. The portal gun will be powered with CO2 in the air so it will be good to the ozone layer. You can use the portal gun to transport heavy cargo. Prices will range from 5,000 to 10,000 dollars.

Ajay Huff, 5th, Jonesville Middle, Mrs. Austin

I wish robots were invented so they could help me with my homework. My nana usually helps me, but a robot would be better so Nana can take a break. A robot would make me so happy so Nana wouldn’t have to help me. This is what I wish was invented.

Kyla Young, 2nd, Hilton Elementary, Mrs. Edwards

I wish I could invent a lot of things. I would invent a flying car so you could fly over water. I would like to invent a chocolate bar that had infinite chocolate. I would invent a robot that was your butler. I would invent a flying house so instead of renting a hotel room you could land at a spot. I would invent clothes that never got dirty. I would invent a random robot that gave poor people food, money, water, and a house.

Ean McConnell, 2nd, Nickelsville Elementary, Mrs. Gilmer

If I could invent something that didn’t exist yet, I would invent a cure for cancer. This cure for cancer isn’t like the ones they think they have. This cure would get rid of all the cancer, and it wouldn’t come back ever. I feel like if I could invent this cure, it would solve everything. If this cure for cancer was invented, then no one would have to fear this monster called cancer. This is what I would invent that doesn’t exist yet. No more suffering or bad days.

Logan Johnson, 8th, Surgoinsville Middle, Mrs. Hensley
